Estimated loss

\$1,11 M

Problem

Healthcare providers often face high no-show rates, leading to inefficient resource allocation and financial losses.

Analysis

110K+ appointments analyzed, I analyzed patient attendance patterns by: Cleaning and structuring raw data Creating key variables such as wait time and attendance flag Evaluating behavioral drivers like SMS reminders and patient characteristics

Key Insights

1. Financial Impact Estimated loss exceeds \$1.11M due to missed appointments No-show rate: 20.18%

2. Wait Time is the Main Driver

Same-day appointments → ~5% no-show 7 days wait → 30%+ no-show

Conclusion: longer wait times

3. SMS Reminders Are Not Enough

Patients receiving SMS still show high no-show rates

Conclusion: SMS alone does not solve the

Recommendations

1. Reduce Wait Time Prioritize appointments within <7 days Optimize scheduling capacity
2. Improve Reminder Strategy Use multi-channel reminders (SMS + calls) Focus on high-risk segments
